Review purpose: Yossi extraction-accuracy confirmation only. This does not approve runtime use, question generation, reviewed-bank promotion, or student-facing release.

Trusted Source Extraction Accuracy Review Packet

Packet family: Trusted Teacher Source Extraction Accuracy Review Packet

This packet is print-friendly Markdown generated from the trusted teacher-source extraction review template for Yossi's extraction-accuracy confirmation pass. It is not broad educational re-approval, not generated-question review, and not runtime approval.

1. One-Page Review Summary

- Batch ID: `batch_002_linear_bereishis`
- Source package: `linear_chumash_translation_most_parshiyos_in_torah` - Linear Chumash Translation for Most Parshiyos in Torah
- Source authority: `trusted_teacher_source`
- Pasuk/content range: Bereishis 1:6 through Bereishis 2:3
- Raw source file path:
- `data/curriculum_extraction/raw_sources/batch_002/linear_chumash_bereishis_1_6_to_2_3_cleaned.md`
- Normalized data file path:
- `data/curriculum_extraction/normalized/batch_002_linear_chumash_bereishis_1_6_to_2_3_pasuk_segments.jsonl`
- Number of extracted records: `123`
- Record types included: `pasuk_segment`
- Extraction review status: `pending_yossi_extraction_accuracy_pass`
- Runtime status: `not_runtime_ready` / `not_runtime_active`
- Question status: `not_question_ready`
- Question-generation status: `not_question_ready`
- Student-facing status: `not_student_facing`
- Recommended current Yossi decision: Not fully approved yet. Sample extractions look generally plausible, but all 123 records carry warning flags due to noisy PDF extraction and Hebrew alignment from canonical pasuk text. Please use this expanded packet to confirm Hebrew-English phrase matching, long parenthetical alignment, and long phrase boundaries before marking this batch Yossi extraction verified.

Yossi decision box:

- [ ] Approved extraction accuracy
- [ ] Approved with corrections needed
- [ ] Not approved yet

Signature / reviewer:

Date:

Notes:

2. What Yossi Is Checking

- I am checking extraction accuracy only.
- I am not re-approving the educational value of this trusted source.
- I am not approving runtime use.
- I am not approving generated questions.
- Do not re-approve the educational value of this trusted source from scratch.

Yossi should confirm source matching, Hebrew fidelity, OCR/copy accuracy, extracted translation/explanation accuracy, classification, and mapping.

Important current decision: Do not mark this batch fully `yossi_extraction_verified` yet. The expanded evidence below is intended to make that future decision possible after Yossi checks Hebrew-English phrase matching, long parenthetical alignment, and long phrase boundaries.

3. Safety Boundaries

- Runtime: blocked
- Question generation: blocked
- Student-facing use: blocked
- Reviewed bank: blocked

This packet does not authorize generated questions, protected previews, answer choices, answer keys, reviewed-bank promotion, runtime activation, or student-facing use.

4. Review Instructions

1. Review the expanded source/evidence cards.
2. Check Hebrew-English phrase matching.
3. Check parenthetical/explanatory alignment.
4. Check long phrase boundaries and segment order.
5. Mark any row needing correction before verification.
6. Leave the batch pending unless all sampled evidence supports full extraction accuracy.

5. Expanded Source Evidence Review Samples

Item 1 - Bereishis 1:6 / `pasuk_segment_batch_002_bereishis_1_6_001`

Sample reasons: first 5 records, first extracted record, warning flags present.

- Reference: `Bereishis 1:6`
- Source reference: `Bereishis 1:6`
- Source excerpt: וַיֹּאמֶר אֱלֹקִים = and Hashem said
- Cleaned source Hebrew side: וַיֹּאמֶר אֱלֹקִים
- Extracted Hebrew: וַיֹּאמֶר אֱלֹקִים
- Source English / Translation side: and Hashem said
- Extracted English / Translation: and Hashem said
- Parenthetical / explanatory text: none recorded
- Segment order: `1`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 2 - Bereishis 1:6 / `pasuk_segment_batch_002_bereishis_1_6_002`

Sample reasons: first 5 records, warning flags present.

- Reference: `Bereishis 1:6`
- Source reference: `Bereishis 1:6`
- Source excerpt: יְהִי רָקִיעַ = there should be a spread
- Cleaned source Hebrew side: יְהִי רָקִיעַ
- Extracted Hebrew: יְהִי רָקִיעַ
- Source English / Translation side: there should be a spread
- Extracted English / Translation: there should be a spread
- Parenthetical / explanatory text: none recorded
- Segment order: `2`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 3 - Bereishis 1:6 / `pasuk_segment_batch_002_bereishis_1_6_003`

Sample reasons: first 5 records, warning flags present.

- Reference: `Bereishis 1:6`

- Source reference: `Bereishis 1:6`
- Source excerpt: בְּתוֹךְ הַמָּיִם = in middle of the water
- Cleaned source Hebrew side: בְּתוֹךְ הַמָּיִם
- Extracted Hebrew: בְּתוֹךְ הַמָּיִם
- Source English / Translation side: in middle of the water
- Extracted English / Translation: in middle of the water
- Parenthetical / explanatory text: none recorded
- Segment order: `3`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 4 - Bereishis 1:6 / `pasuk_segment_batch_002_bereishis_1_6_004`

Sample reasons: first 5 records, warning flags present.

- Reference: `Bereishis 1:6`
- Source reference: `Bereishis 1:6`
- Source excerpt: וְיהִי מַבְדִּיל = and it should be a separator
- Cleaned source Hebrew side: וְיהִי מַבְדִּיל
- Extracted Hebrew: וְיהִי מַבְדִּיל
- Source English / Translation side: and it should be a separator

- Extracted English / Translation: and it should be a separator
- Parenthetical / explanatory text: none recorded
- Segment order: `4`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 5 - Bereishis 1:6 / `pasuk_segment_batch_002_bereishis_1_6_005`

Sample reasons: first 5 records, long parenthetical/explanatory alignment, warning flags present.

- Reference: `Bereishis 1:6`
- Source reference: `Bereishis 1:6`
- Source excerpt: בֵּין מַיִם לְמָיִם = between (some of the) water to the (rest of the) water
- Cleaned source Hebrew side: בֵּין מַיִם לְמָיִם
- Extracted Hebrew: בֵּין מַיִם לְמָיִם
- Source English / Translation side: between (some of the) water to the (rest of the) water
- Extracted English / Translation: between (some of the) water to the (rest of the) water
- Parenthetical / explanatory text: some of the ; rest of the
- Segment order: `5`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`

- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 6 - Bereishis 1:7 / `pasuk_segment_batch_002_bereishis_1_7_003`

Sample reasons: deterministic random sample, warning flags present.

- Reference: `Bereishis 1:7`
- Source reference: `Bereishis 1:7`
- Source excerpt: בֵּין הַמַּיִם אֲשֶׁר מִתַּחַת לָרָקִיעַ = between the water that (is) from under to the spread
- Cleaned source Hebrew side: בֵּין הַמַּיִם אֲשֶׁר מִתַּחַת לָרָקִיעַ
- Extracted Hebrew: בֵּין הַמַּיִם אֲשֶׁר מִתַּחַת לָרָקִיעַ
- Source English / Translation side: between the water that (is) from under to the spread
- Extracted English / Translation: between the water that (is) from under to the spread
- Parenthetical / explanatory text: is
- Segment order: `3`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.

- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 7 - Bereishis 1:10 / `pasuk_segment_batch_002_bereishis_1_10_001`

Sample reasons: deterministic random sample, warning flags present.

- Reference: `Bereishis 1:10`
- Source reference: `Bereishis 1:10`
- Source excerpt: וַיִּקְרָא אֱלֹקִים לַיַּבָּשָׁה אֶרֶץ = and Hashem called the dry land Eretz
- Cleaned source Hebrew side: וַיִּקְרָא אֱלֹקִים לַיַּבָּשָׁה אֶרֶץ
- Extracted Hebrew: וַיִּקְרָא אֱלֹקִים לַיַּבָּשָׁה אֶרֶץ
- Source English / Translation side: and Hashem called the dry land Eretz
- Extracted English / Translation: and Hashem called the dry land Eretz
- Parenthetical / explanatory text: none recorded
- Segment order: `1`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 8 - Bereishis 1:11 / `pasuk_segment_batch_002_bereishis_1_11_006`

Sample reasons: long parenthetical/explanatory alignment, warning flags present.

- Reference: `Bereishis 1:11`
- Source reference: `Bereishis 1:11`
- Source excerpt: עַל הָאָרֶץ = (these grasses and trees will all grow) on the land
- Cleaned source Hebrew side: עַל הָאָרֶץ
- Extracted Hebrew: עַל הָאָרֶץ
- Source English / Translation side: (these grasses and trees will all grow) on the land
- Extracted English / Translation: (these grasses and trees will all grow) on the land
- Parenthetical / explanatory text: these grasses and trees will all grow
- Segment order: `6`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment

- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 9 - Bereishis 1:12 / `pasuk_segment_batch_002_bereishis_1_12_007`

Sample reasons: long parenthetical/explanatory alignment, warning flags present.

- Reference: `Bereishis 1:12`
- Source reference: `Bereishis 1:12`
- Source excerpt: וַיַּרְא אֱלֹקִים כִּי טוֹב = and Hashem saw that (it was) good (to continue as such)
- Cleaned source Hebrew side: וַיַּרְא אֱלֹקִים כִּי טוֹב
- Extracted Hebrew: וַיַּרְא אֱלֹקִים כִּי טוֹב
- Source English / Translation side: and Hashem saw that (it was) good (to continue as such)
- Extracted English / Translation: and Hashem saw that (it was) good (to continue as such)
- Parenthetical / explanatory text: it was ; to continue as such
- Segment order: `7`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 10 - Bereishis 1:14 / `pasuk_segment_batch_002_bereishis_1_14_003`

Sample reasons: 10 longest Hebrew phrase segments, warning flags present.

- Reference: `Bereishis 1:14`
- Source reference: `Bereishis 1:14`
- Source excerpt: לְהַבְדִּיל בֵּין הַיּוֹם וּבֵין הַלָּיְלָה = to separate between the day and between the night
- Cleaned source Hebrew side: לְהַבְדִּיל בֵּין הַיּוֹם וּבֵין הַלָּיְלָה
- Extracted Hebrew: לְהַבְדִּיל בֵּין הַיּוֹם וּבֵין הַלָּיְלָה
- Source English / Translation side: to separate between the day and between the night
- Extracted English / Translation: to separate between the day and between the night
- Parenthetical / explanatory text: none recorded
- Segment order: `3`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 11 - Bereishis 1:14 / `pasuk_segment_batch_002_bereishis_1_14_004`

Sample reasons: 10 longest English/explanatory records, long parenthetical/explanatory alignment, warning flags present.

- Reference: `Bereishis 1:14`
- Source reference: `Bereishis 1:14`
- Source excerpt: וְהָיוּ לְאֹתֹת = and they (the luminaries) will be for signs (e.g. an eclipse is a bad sign)
- Cleaned source Hebrew side: וְהָיוּ לְאֹתֹת
- Extracted Hebrew: וְהָיוּ לְאֹתֹת
- Source English / Translation side: and they (the luminaries) will be for signs (e.g. an eclipse is a bad sign)
- Extracted English / Translation: and they (the luminaries) will be for signs (e.g. an eclipse is a bad sign)
- Parenthetical / explanatory text: the luminaries ; e.g. an eclipse is a bad sign
- Segment order: `4`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Needs correction

Yossi notes: _____

Item 13 - Bereishis 1:16 / `pasuk_segment_batch_002_bereishis_1_16_004`

Sample reasons: 10 longest Hebrew phrase segments, warning flags present.

- Reference: `Bereishis 1:16`
- Source reference: `Bereishis 1:16`
- Source excerpt: וְאֶת הַמְּאוֹר הַקָּטֹן לְמֶמְשֶׁלֶת הַלָּיְלָה = and the small(er) luminary for the rulership of the night
- Cleaned source Hebrew side: וְאֶת הַמְּאוֹר הַקָּטֹן לְמֶמְשֶׁלֶת הַלָּיְלָה
- Extracted Hebrew: וְאֶת הַמְּאוֹר הַקָּטֹן לְמֶמְשֶׁלֶת הַלָּיְלָה
- Source English / Translation side: and the small(er) luminary for the rulership of the night
- Extracted English / Translation: and the small(er) luminary for the rulership of the night
- Parenthetical / explanatory text: er
- Segment order: `4`
- Classification: `pasuk_segment; linear_phrase`

- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 14 - Bereishis 1:17 / `pasuk_segment_batch_002_bereishis_1_17_002`

Sample reasons: deterministic random sample, warning flags present.

- Reference: `Bereishis 1:17`
- Source reference: `Bereishis 1:17`
- Source excerpt: בִּרְקִיעַ הַשָּׁמָיִם = in the spread of the sky
- Cleaned source Hebrew side: בִּרְקִיעַ הַשָּׁמָיִם
- Extracted Hebrew: בִּרְקִיעַ הַשָּׁמָיִם
- Source English / Translation side: in the spread of the sky
- Extracted English / Translation: in the spread of the sky
- Parenthetical / explanatory text: none recorded
- Segment order: `2`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.

- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 15 - Bereishis 1:20 / `pasuk_segment_batch_002_bereishis_1_20_001`

Sample reasons: deterministic random sample, warning flags present.

- Reference: `Bereishis 1:29`
- Source reference: `Bereishis 1:29`
- Source excerpt: וְאֶת כָּל הָעֵץ אֲשֶׁר בּוֹ פְרִי עֵץ זֹרֵעַ זָרַע = and all the trees that in it (is) fruit of a tree (which those fruit) makes seed
- Cleaned source Hebrew side: וְאֶת כָּל הָעֵץ אֲשֶׁר בּוֹ פְרִי עֵץ זֹרֵעַ זָרַע
- Extracted Hebrew: וְאֶת כָּל הָעֵץ אֲשֶׁר בּוֹ פְרִי עֵץ זֹרֵעַ זָרַע

- Source English / Translation side: and all the trees that in it (is) fruit of a tree (which those fruit) makes seed
- Extracted English / Translation: and all the trees that in it (is) fruit of a tree (which those fruit) makes seed
- Parenthetical / explanatory text: is ; which those fruit
- Segment order: `5`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 29 - Bereishis 1:30 / `pasuk_segment_batch_002_bereishis_1_30_003`

Sample reasons: 10 longest English/explanatory records, 10 longest Hebrew phrase segments, long parenthetical/explanatory alignment, warning flags present.

- Reference: `Bereishis 1:30`
- Source reference: `Bereishis 1:30`
- Source excerpt: וּלְכֹל רוֹמֵשׂ עַל הָאָרֶץ אֲשֶׁר בּוֹ נֶפֶשׁ חַיָּה = and for all which creep on the land (including domestic animals), that is in it a live soul
- Cleaned source Hebrew side: וּלְכֹל רוֹמֵשׂ עַל הָאָרֶץ אֲשֶׁר בּוֹ נֶפֶשׁ חַיָּה
- Extracted Hebrew: וּלְכֹל רוֹמֵשׂ עַל הָאָרֶץ אֲשֶׁר בּוֹ נֶפֶשׁ חַיָּה
- Source English / Translation side: and for all which creep on the land (including domestic animals), that is in it a live soul
- Extracted English / Translation: and for all which creep on the land (including domestic animals), that is in it a live soul
- Parenthetical / explanatory text: including domestic animals
- Segment order: `3`
- Classification: `pasuk_segment; linear_phrase`

- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

Yossi notes: _____

Item 36 - Bereishis 2:3 / `pasuk_segment_batch_002_bereishis_2_3_003`

Sample reasons: last 5 records, warning flags present.

- Reference: `Bereishis 2:3`
- Source reference: `Bereishis 2:3`
- Source excerpt: מִכָּל מְלַאכְתּוֹ = from all His constructive work
- Cleaned source Hebrew side: מִכָּל מְלַאכְתּוֹ
- Extracted Hebrew: מִכָּל מְלַאכְתּוֹ

- Source English / Translation side: from all His constructive work
- Extracted English / Translation: from all His constructive work
- Parenthetical / explanatory text: none recorded
- Segment order: `3`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

Human review question: Does the extracted Hebrew phrase correctly match the source English/translation phrase and any parenthetical explanation for this specific segment?

Yossi checks:

- [ ] Source match
- [ ] Hebrew phrase alignment
- [ ] English / translation alignment
- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

Item 37 - Bereishis 2:3 / `pasuk_segment_batch_002_bereishis_2_3_004`

Sample reasons: last 5 records, 10 longest English/explanatory records, long parenthetical/explanatory alignment, last extracted record, warning flags present.

- Reference: `Bereishis 2:3`
- Source reference: `Bereishis 2:3`
- Source excerpt: אֲשֶׁר בָּרָא אֱלֹהִים לַעֲשׂוֹת = that Hashem created (and was supposed) to make (on the seventh day, namely, the person, and instead He made double on the sixth day and ceased on the seventh)
- Cleaned source Hebrew side: אֲשֶׁר בָּרָא אֱלֹהִים לַעֲשׂוֹת
- Extracted Hebrew: אֲשֶׁר בָּרָא אֱלֹהִים לַעֲשׂוֹת
- Source English / Translation side: that Hashem created (and was supposed) to make (on the seventh day, namely, the person, and instead He made double on the sixth day and ceased on the seventh)
- Extracted English / Translation: that Hashem created (and was supposed) to make (on the seventh day, namely, the person, and instead He made double on the sixth day and ceased on the seventh)

- Parenthetical / explanatory text: and was supposed ; on the seventh day, namely, the person, and instead He made double on the sixth day and ceased on the seventh
- Segment order: `4`
- Classification: `pasuk_segment; linear_phrase`
- Mapping / skill: `phrase_translation`
- Warning flags: `local_pdf_source, needs_manual_review, hebrew_aligned_from_local_pasuk_text, source_pdf_text_layer_noisy`
- Source extraction method: `manual_cleaned_excerpt`
- Source extraction note: Extracted from the local PDF into a cleaned markdown excerpt. The PDF text layer surfaced noisy/transliterated Hebrew, so the Hebrew phrase was aligned against the local canonical pasuk text for this source-backed reference. This batch remains isolated and needs review.
- Why this match is believed correct: The source excerpt contains an equals-sign phrase pair, the extracted Hebrew is the canonical Hebrew phrase aligned for this source-backed ref, and the extracted English matches the cleaned source phrase after the equals sign. The PDF text layer was noisy, so Yossi must confirm that this canonical-Hebrew alignment is acceptable.

- [ ] Parenthetical explanation alignment
- [ ] Segment order matches pasuk flow
- [ ] Classification and mapping reasonable
- [ ] Needs correction

Yossi notes: _____

6. Expanded Sample Selection Logic

The generator selected an expanded deterministic evidence set because every record in Batch 002/003 currently carries warning flags from noisy PDF extraction and canonical-Hebrew alignment.

- First records: first 5 records
- Last records: last 5 records
- Deterministic random records: 10 records selected by stable SHA-256 ordering
- Longest English / explanatory records: top 10 by extracted English length
- Long parenthetical records: all records with substantial parenthetical or explanatory text
- Long Hebrew records: top 10 by extracted Hebrew phrase length
- Missing/suspicious display fields: all records detected by the generator
- Samples included in this packet: `37`
- Sample bucket counts: `{'10 longest English/explanatory records': 10, '10 longest Hebrew phrase segments': 10, 'deterministic random sample': 10, 'first 5 records': 5, 'first extracted record': 1, 'last 5 records': 5, 'last extracted record': 1, 'long parenthetical/explanatory alignment': 13, 'warning flags present': 37}`
- Full normalized file(s): `data/curriculum_extraction/normalized/batch_002_linear_chumash_bereishis_1_6_to_2_3_pasuk_segments.jsonl`

7. Extraction Summary Table

Count Type	Count
Total records	123
Records by type	{'pasuk_segment': 123}
Records with Hebrew	123
Records with English/translation	123
Records missing source reference	0
Records missing Hebrew	0
Records missing translation	0
Records with classification/mapping	123
Records with warnings	123

8. Targeted Confirmation Items

Batch-specific targeted confirmation items:

Confirmation Item ID	Source Name	File Path	Unclear Issue	Exact Question For Yossi	Current Status	Recommended Status
`confirm_hebrew_english_phrase_matching`	Batch source extraction	`batch normalized records`	All or many records carry warning flags (123 warnings counted).	Does each sampled Hebrew phrase match the attached English translation phrase?	`pending_yossi_extraction_accuracy_pass`	If all rows are accurate, a separate task may mark the batch yossi_extraction_verified.
`confirm_parenthetical_explanation_alignment`	Batch source extraction	`batch normalized records`	Parenthetical explanations may be attached to the wrong Hebrew phrase if phrase boundaries drifted.	Are parenthetical explanations aligned to the correct Hebrew phrase or segment?	`pending_yossi_extraction_accuracy_pass`	Correct any misaligned row before verification.
`confirm_long_phrase_boundary_accuracy`	Batch source extraction	`batch normalized records`	Long Hebrew or English segments are more likely to hide phrase-boundary mistakes.	Do long Hebrew phrase boundaries match the source and pasuk flow?	`pending_yossi_extraction_accuracy_pass`	Keep unclear long rows pending until corrected.
`confirm_source_wording_not_generated`	Batch source extraction	`cleaned source excerpt and normalized records`	The packet must distinguish copied/extracted source wording from generated wording.	Is the English wording copied/extracted from the trusted source rather than generated by the system?	`pending_yossi_extraction_accuracy_pass`	Only source-derived wording may become extraction-verified.
`confirm_cleanup_normalization_acceptable`	Batch source extraction	`cleaned source excerpt and normalized records`	Cleaned text may have normalized noisy PDF output beyond acceptable extraction cleanup.	Was the cleaned text normalized only enough to recover the source, without changing meaning?	`pending_yossi_extraction_accuracy_pass`	Document or correct any over-normalized row.
`confirm_segment_order_matches_pasuk_flow`	Batch source extraction	`batch normalized records`	Segment order must match the pasuk flow for future map expansion.	Does segment order follow the pasuk flow in the source?	`pending_yossi_extraction_accuracy_pass`	Correct ordering before verification if needed.

Unrelated global confirmation items were intentionally omitted from this batch packet. They should be reviewed in a separate global source-confirmation packet, not as part of the Batch 002/003 extraction decision.

9. Corrections Log

Item ID	Issue Type	Correction Needed	Yossi Notes	Resolved?
	Hebrew/OCR			
	Translation/explanation			
	Missing record			
	Wrong reference			
	Wrong classification			
	Wrong mapping			
	Unclear source			
	Other			

10. Final Decision Page

Batch: `batch_002_linear_bereishis`

Reviewer:

Date:

Decision:

- ☐ Approved extraction accuracy
- ☐ Approved with corrections needed
- ☐ Not approved yet

Required corrections:

1.

2.

3.

Final notes:

Appendix: Review Paths That Remain Strict

- AI-generated questions still require full generated-question review.
- Protected preview packets still require protected preview review.
- Answer choices and answer keys still require their own review before use.
- Reviewed-bank promotion still requires a reviewed-bank promotion gate.
- Runtime activation still requires a runtime activation gate.

Appendix: Template Source

- Policy: `docs/sources/trusted_teacher_source_policy.md`
- Template: `docs/sources/trusted_teacher_source_extraction_review_packet_template.md`

Required template language present: one extraction-accuracy confirmation pass. Confirm that the copied or OCRed source text matches the source. Confirm that Hebrew spelling, nikud, and table layout are faithful. Confirm that translations, explanations, answer keys, or examples were extracted accurately. Confirm that classification and standards/skill mapping are reasonable.
